Career Summary

Project Management, supply chain project management, and junior developer with front-end knowledge in Html5, Css3, JavaScript, Bootstrap, jquery, and terminal. Delivering projects and products on time is my main focus. Great soft people skills, Critical thinker, Collaborative, Creative, and ability to work under pressure and time management skills.

Technical Skills

Project Management and Supply Chain, along with front end web development skills in Html5, Css3, Ajax, JavaScript, Bootstrap, Visual Studio Code, terminal, and Github.

Projects

Team member of Covid-19 tracker and statistics live interactive fully functional web site. The User can select city of choice to view live covid-19 updates called from API's. I was instrumental in front - end server side and monitoring and controlling specificities related to time, criteria acceptance, and resources.

As our project name suggest, Bicycle App shop is an application that allows users to select bicycles by brand name, accessories, and service request. The user will have the ability to view the actual image of their selection along with the price and inventory in –stock associated with each item. This webpage contains fully functional forms for the users and members to sign in, along with operational features that allow them to easily navigate, view options, make selections, and checkout successfully.

Employee directory was build using React. As a user, I want to be able to view my entire employee directory at once so that I have quick access to their information. Given a table of random users

generated from the Random User API, when the user loads the page, a table of employees should render. The user should be able to:

Sort the table by at least one category

Filter the users by at least one property.
